

IN THE SPECIFICATION

Please replace the paragraph beginning at page 10, line 26 (as numbered) with:

Operation of the device 90 is similar to that of the device 20, and the pumping operation is performed by the head membranes 108 of the honeycomb structure 103, and the top wall 22 has the purpose of providing protection, since it moreover bears both upon a respective top end portion 107a of the side walls 107 connected in a fluid-tight way to the respective head membranes ~~[[107]]~~ 108 and upon the respective abutment walls 106.

Please replace the paragraph beginning at page 12, line 6 (as numbered) with:

In addition, the number of components is particularly small since the top wall 22 is directly in contact with the tyres, and the materials that can be used, such as polyurethane, are suitable both for the rigid parts, for example the side walls ~~[[109]]~~ 107 and the rigid plate 100, and for the deformable parts, for example the top wall 22 and the head membranes 108, at the same time also having optimal wear-resistant properties.
